Summary

Automation and integration-test engineer with 10+ years of experience improving software quality, release readiness, and operational reliability. Strong Python-based automation background (Selenium, pytest) with hands-on CI/CD and cloud exposure (Jenkins, Docker, AWS). Known for systematic troubleshooting (log/telemetry analysis in Splunk/Datadog), clear communication with users and engineers, and delivering practical tooling that reduces manual effort and shortens feedback cycles in Agile environments.

Education

Georgia Institute of Technology M.S., Computer Science GPA 3.60	Atlanta, GA	May 2026
University of Colorado B.S., Computer Science	Boulder, CO	May 2016

Work Experience

Charter Communications <i>Network Engineer III (Integration Testing)</i>	Greenwood Village, CO Feb 2018–Oct 2025
--	--

- Conducted integration testing on cloud services to validate deployments and end-to-end functionality across environments using AWS and REST API testing.
- Used Splunk to analyze logs/events, isolate root causes, and improve reliability; reduced resolution times by 20% through faster, data-driven triage.
- Partnered with engineering and operations teams to reproduce issues, document findings, and communicate actionable fixes in an Agile, ticket-driven workflow.

Viavi (Formerly JDSU) <i>Automation Test Engineer</i>	Colorado Springs, CO May 2015–Feb 2017
---	---

- Developed and maintained automated test scripts using Python and Selenium WebDriver, reducing manual testing and increasing test coverage.
- Reduced testing times by implementing CI-triggered automated test execution for nightly builds, enabling faster feedback and higher release confidence.

Laboratory of Atmospheric and Space Physics (LASP) <i>Software Development Internship</i>	Boulder, CO Mar 2014–May 2015
---	----------------------------------

- Developed Java-based applications for scientific data processing; emphasized correctness and performance through testing, code reviews, and structured debugging.
- Managed version control using SVN, contributing to collaborative development and maintaining code integrity across releases.

Community Engagement

Volunteer Math Tutor for Boys Hope, Girls Hope Volunteer Math and Reading Tutor for Whiz Kids	Spring 2024 Fall 2025–Present
--	----------------------------------

Skills

Languages: Python, Java, C++

Testing & Quality: Pytest, Selenium WebDriver, Integration Testing, API Testing (Requests, Postman), Test Design, Page Object Model

CI/CD & Platforms: Jenkins, Docker, AWS (CodeBuild, CodePipeline), Linux

Observability & Troubleshooting: Splunk, Datadog, Root-Cause Analysis, Performance Triage

Data / Tools: SQL, Git, SVN, Jira, Agile (Scrum)

Other: Endpoint/IT support workflows, basic hardware/software troubleshooting, ITSM concepts (e.g., ServiceNow-style queues)
